For a summary of the survey methods, please see the Overview of the 2009 Maryland Nursing Facility Family Survey or the Statewide Report posted on this web page.

Peer Groups: The term “peer group” refers to groupings of similar facilities by their geographic location, their size (number of licensed beds) and ownership type (for-profit or non-profit). This report contains comparisons (beginning on page 2) of the individual nursing home scores with peer groups so you can see how this facility compares to those peer groups

Confidence Interval (CI): This is a range of numbers (CI Low is the lower value and CI High is the upper value of the range). The confidence interval is the range in which the value for the “true” average lies – that is, the value if every family member or designated responsible party responded to the survey. The phrase 95% confidence indicates a 95% certainty the true average will be within the range. The confidence interval DOES NOT represent the highest and lowest rating given by parties responding to the survey.

Scores that are Not Reported (NR): Scores that are replaced with “NR” mean that there were less than 10 responses for that item or domain and the facility score has not been reported because of too few responses.

The Sacred Heart Home, Inc. peer groups are: the Southern region, the 81-120 Beds size category, and a Non-profit facility.

I. Areas of Care (Domain) Scores

Figure 1.1. 2007-2009 Domain Scores for Sacred Heart Home, Inc.

Table 1.1. 2007-2009 Domain Scores for Sacred Heart Home, Inc.
